

PROJECT REPORT

IMDB RATING ANALYSIS

—

PROJECT 5

—

YASHI GUPTA

PROJECT DESCRIPTION

The project aims to analyze imdb movies data to determine the factors that contribute to a movie's success based on its imdb score. The main goal is to examine various elements of movies, including genre, duration, language, director, and budget, to understand how these factors influence the ratings and overall success of a movie on IMDb. By comprehending these connections, individuals involved in the movie industry, such as producers, directors, and investors, can make well-informed choices in their upcoming projects to increase their likelihood of achieving success.

Objectives

1. Determine the most prevalent movie genres and examine their influence on imdb ratings.
2. Analyze the correlation between the length of a movie and its rating on IMDb. Examine the impact of language on the evaluation of movies.
3. Examine the influence of directors in determining the outcome of a film.
4. Investigate the correlation between movie budgets and their financial achievements.

Approach

The approach involved collecting and cleaning the IMDB movies dataset to make it suitable for analysis. Data preprocessing included handling missing values, converting data types where necessary, and feature engineering to ensure accuracy and consistency. After the data was prepared, various analytical techniques were employed using Microsoft Excel to calculate descriptive statistics, correlations, and percentiles to uncover meaningful patterns. The analysis was broken down into distinct tasks based on different factors like genre, duration, language, director, and budget.

The following tasks were executed:

1. **Movie Genre Analysis:** Distribution of movie genres and their relationship with IMDB ratings using descriptive statistics.
2. **Movie Duration Analysis:** Exploring the relationship between movie durations and IMDB ratings through scatter plots and trendlines.
3. **Language Analysis:** Analyzing the impact of movie language on IMDB ratings.
4. **Director Analysis:** Identifying the top directors and their contribution to movie ratings using percentiles.
5. **Budget Analysis:** Analyzing the correlation between movie budgets and gross earnings to identify the movies with the highest profit margins.

Approach

To approach the analysis, I began by cleaning and structuring the data to ensure its consistency. I then used **Microsoft Excel** as the primary tool for performing the analysis due to its powerful functions for data manipulation and statistical analysis. Specifically, I used the following steps:

1. Data Preprocessing:

- Handled missing values where applicable.
- Removed any duplicates to ensure that the dataset was accurate.
- Removed useless columns.
- Converted data types where necessary (e.g., dates, numeric values).

2. Analysis:

- Used **COUNTIF**, **AVERAGE**, **MEDIAN**, **MODE**, **MAX**, **MIN**, **VAR**, and **STDEV** functions for descriptive statistics to analyze each factor (genre, duration, language, director, and budget).
- Created **scatter plots** and added **trendlines** to visualize the relationship between **duration** and IMDB ratings.
- Employed **PERCENTILE** function to identify the directors with the highest IMDB scores and compare them to the overall distribution.
- Used **CORREL** to analyze the relationship between **budget** and **gross earnings**.

3. Visualization:

- Created various charts (e.g., bar charts, scatter plots) to visualize the results and trends.
- Used trendlines to demonstrate the correlation between variables.

Tech-Stack Used

- **Microsoft Excel 2022:** Excel was used to perform the data analysis and calculations. The software's vast array of built-in functions allowed me to calculate descriptive statistics, correlation coefficients, and percentiles with ease. I also used its charting capabilities to visualize the relationships between different variables.

INSIGHTS

1. Movie Genre Analysis:

- Certain genres like Comedy, Drama, Action and Adventure tend to have higher average IMDB ratings compared to others like Horror or Drama.
- Genres with more variability in IMDB scores often include those that mix multiple elements (e.g., Fantasy/Action).
- The analysis suggests that some genres consistently perform well with audiences, leading to higher ratings, possibly due to broad appeal or well-established fan bases.

2. Movie Duration Analysis:

- There is no clear correlation between movie duration and IMDB scores. While some longer movies may receive higher ratings due to rich storytelling, there is a mix of opinions on shorter movies, with some receiving high ratings despite their brief run-time.
- The average duration of movies with high ratings can vary, indicating that the length of a movie does not always dictate its quality or viewer satisfaction.

3. Language Analysis:

- English is the most common language in the dataset, with a large number of high-rated movies.
- Non-English languages show a mixed result; while they may not have as many high ratings overall, certain languages like Spanish and Japanese often correlate with niche but high-quality movies (e.g., anime or art films).
- The analysis shows that movies in English tend to dominate high ratings, but non-English films can often surprise with high-quality offerings and appeal to specific audiences.

4. Director Analysis:

- Directors with a consistent history of producing high IMDB-rated movies (e.g., Christopher Nolan, Steven Spielberg) often have higher average ratings. These directors are in the top percentile of the dataset.
- The influence of a director's style and reputation plays a significant role in a movie's overall success, showing that a skilled director can create a more immersive and engaging movie, often leading to higher audience ratings.

5. Budget Analysis:

- There is a positive correlation between movie budget and gross earnings, indicating that larger budgets tend to lead to higher earnings. However, the profit margin varies significantly.
- The movie with the highest profit margin in this dataset is Avatar, which made a massive profit compared to its budget. This confirms that despite its high budget, its financial success was extraordinary, with gross earnings far outpacing production costs.

Conclusion : Avatar stands out as the most profitable movie in this dataset, not only due to its high gross earnings but also because of its massive profit margin, making it a remarkable example of financial success in the film industry.

- The analysis highlights the importance of factors like genre, director reputation, and budget in determining a movie's IMDB rating and its financial success, with certain genres and directors consistently achieving high ratings.

Tasks

A. Movie Genre Analysis: Analyze the distribution of movie genres and their impact on the IMDB score.

Step 1

Separated the genre column based on different genre.

movie_title	genres	imdb_scor	list of genres	Action	Adventure	Drama	Animation	Comedy	Mystery	Crime	Biography	Fantasy	Document	Sci-Fi	Horror	Romance
Avatar	Action Adventure Fantasy Sci-Fi	7.9	Action	7.9	7.9	6.7	7.8	7.8	7.5	7.2	5.5	7.9	7.8	7.9	7	6.2
Pirates of the Caribbean:	Action Adventure Fantasy	7.1	Adventure	7.1	7.1	7.2	7.3	6.8	7.5	6.2	7.5	7.1	7.3	6.6	5.2	7.8
Spectre	Action Adventure Thriller	6.8	Drama	6.8	6.8	7.7	6.3	7.3	6.5	9	6.8	7.8	8	7.5	7.2	7.2
The Dark Knight Rises	Action Thriller	8.5	Animation	8.5	6.6	7.3	8.3	6.3	7.5	6.7	7	7.5	7.1	6.9	6.2	7.7

6.4	130		
6.7	142		
6.8	125		
6.3	106		

Insights:

Positive Correlation:

The trendline indicates a slight positive correlation between movie duration and IMDB score. This suggests that, generally, longer movies tend to have higher ratings. However, the correlation appears weak because the data points are widely scattered around the trendline.

High Variability:

There is significant variability in ratings for movies of similar durations. For instance: Some shorter movies (e.g., under 100 minutes) have both low and high ratings. Longer movies (e.g., 150+ minutes) also show a wide range of ratings.

Outliers:

There are a few data points that deviate significantly from the trend (e.g., movies with high durations and low ratings or vice versa). These could represent unique cases like critically panned long movies or highly-rated short ones.

Practical Implication:

While longer movies might generally perform better in ratings, duration alone does not strongly determine the IMDB score. Other factors, such as genre, storyline, direction, and acting, likely play a larger role.

C. Language Analysis: Situation: Examine the distribution of movies based on their language.

language	imdb_score	language	count	avg	median	std dev
English	7.9	English	3608	6.421258	6.5	1.052352

English	5.6					

Derived unique languages using data< removes duplicates then used countif function

=COUNTIF(language_range, "English")

Descriptive Statistics for IMDB Ratings by Language:

For each language, calculate the mean, median, and standard deviation of the IMDB scores using :

Mean: =AVERAGE(range_of_IMDB_scores)

Median: =MEDIAN(range_of_IMDB_scores)

Standard Deviation: =STDEV.P(range_of_IMDB_scores)

Insights:

English Dominates: 3608 movies with a moderate average IMDb score of 6.42. High variability (std dev: 1.05) reflects diverse quality.

Top Performers: Telugu: Highest average (8.4), but only 1 movie. Persian: Strong average (8.13) and consistent quality (std dev: 0.45). Danish, Portuguese, and Indonesian: High scores (7.76–7.9) with low variability.

Low Performers: Bosnian: Lowest rating (4.3). Thai, Kazakh, and Russian: Scores below 6.7.

Consistent Languages: French, Japanese, and German movies have high scores with low variability, indicating steady quality.

Conclusion: English leads in volume, but smaller languages like Persian and Telugu excel in quality.

D. Director Analysis: Influence of directors on movie ratings.

Average IMDB Score by Director

director_name	imdb_score		director_name	count	avg
James Cameron	7.9		James Cameron	7	7.914286
Gore Verbinski	7.1		Gore Verbinski	7	6.985714
Sam Mendes	6.8		Sam Mendes	8	7.5

Identify Top Directors:

- Use the PERCENTILE function to calculate the percentile ranks of the directors' average IMDB scores:

=PERCENTILE(H:H, 0.9) [7.5]

	A	B	C
1	director_name	avg	
5	Christopher Nolan	8.425	
561	S.S. Rajamouli	8.4	
627	Richard Marquand	8.4	
694	Sergio Leone	8.433333	
859	Alfred Hitchcock	8.5	
1191	Tony Kaye	8.6	
1441	Ron Fricke	8.5	
1474	Damien Chazelle	8.5	
1586	Charles Chaplin	8.6	
1656	Asghar Farhadi	8.4	
1682	Marius A. Markevicius	8.4	
1727	Majid Majidi	8.5	

TOP 10

- Christopher Nolan (8.425 AVG)** and **Sergio Leone (8.433 AVG)** both have multiple movies and a consistently high rating.
- Other directors such as **Damien Chazelle** and **Richard Marquand** also exhibit high scores with fewer movies but strong averages.

E. Budget Analysis: Explore the relationship between movie budgets and their financial success.

Created a profit column

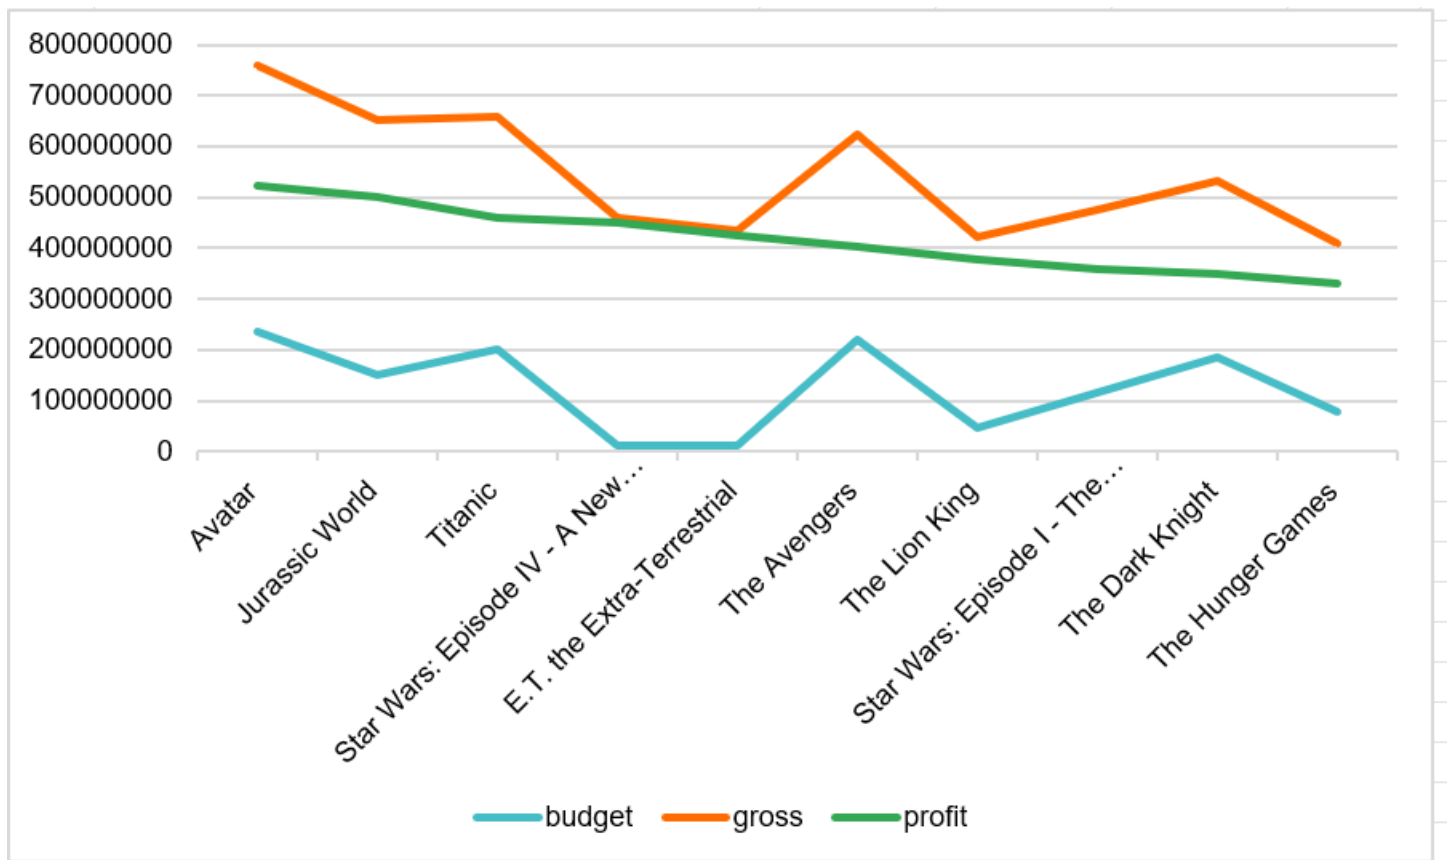

Profit = Gross Earnings - Budget

10	The Hunger Games	78000000	407999255	329999255	423.08

While Avatar is the top most profitable movie in the list, other high-budget films like Jurassic World and Titanic also performed exceedingly well, proving that strategic investments in popular genres, established franchises, and strong global appeal can yield immense profits. Additionally, the significant profits from lower-budget films like E.T. the Extra-Terrestrial highlight that profitability can also be achieved through effective storytelling and audience engagement.
